1 SOW YOUR SEEDS

Sow February to September directly into raised beds.
Sow in drills (groove in the soil) 1cm deep and 10cm apart or scatter the seeds in between slow growing crops.

2 THINNING OUT

Thin out the weaker plants once the seedlings have started to grow to give them more space to develop. Leave around 10cm between each radish.

3 HARVESTING

Pull up when the pink top pokes out of the soil and is around the size of a 10p coin in diameter.
Radishes take 6-8 weeks to grow from seed to harvest. Be careful not to leave them in the ground for too long as they will lose their flavour and become woody.

Radishes grow so quickly you can sow a second and even third crop during the growing season.
